

In the Claims:

Amend claim 1, cancel claim 6, and add claim 7.

1. (Currently amended). A propellant container for internal combustion operated setting tools including electrical consumers (30) and having contact element (31,32) for contacting an electrical power source (40) for supplying electrical power to the electrical consumers (30),the propellant container having a housing (21) and a housing inner space (22) for receiving propellant (23), wherein a portable electrical power supply (40) including one of a battery and a battery pack is arranged on the propellant container (2) to be contacted by the contact elements (31, 32) of a setting tool.

2. (Original). The propellant container of claim 1, wherein the electrical power source (4) is arranged in a receptacle (44) on the propellant container (20).

3. (Original). The propellant container of claim 1, wherein the electrical power supply (40) is mounted on a propellant container (20) using a clip fastening (43).

4. (Original). The propellant container of claim 1, wherein the electrical power supply (40) is fastened to a propellant container (20) using an adhesive fastening (43).

5. (Original). The propellant container of claim 1, wherein the energy contents of the electrical power supply (40) is adapted to the propellant content of the propellant container (20).

6. (Canceled).

7. (New). A propellant container of claim 1, wherein the propellant container is received in a container receptacle of the setting tools in which the contact elements are arranged.
